Nikolay Fedurko

C# Software developer

MAIN SKILLS

- C#
- C/C++
- Python

- Algorithms
- Linux, Docker, git

- English(fluent)
- Applied math
- Postgre, Mongo

You can see an up to date list of my skills **here**.

EXPERIENCE

NXlog — *C/C++ developer*

November 2019 – April 2020

CompatibL — *C# developer*

July 2020 – November 2021

Self employed — *C#, Python tutor, Opensource*

September 2021 – Nowadays

EDUCATION

Kyiv Polytechnic Institute | 2017 - 2021

Institute Of Applied System Analysis – Computer Science

Actually, a lot of self-education.

PET PROJECTS

LazyshGen — *C#*

Source generator(latest C# 9 feature) to get seamlessly lazy at compile time.

Iahr — *Python, Telethon*

HIGHLY customizable telegram userbot creation platform framework.
The biggest of my projects yet, around 4k lines.

BESIDES

There's much more of these! Like two useful telegram bots on C# and NodeJS. Library for analytical calculation of mathematical expressions in C#. Turing machine and some useful macros around it. Job search site on Python/Django.

Also, I pretty much like learning new languages and, by doing this. I "know" around 5-7 languages pretty well and am familiar with other 15+. My favorites being: C#, Python, C++, TS, Lisp, Prolog, Julia, Powershell.

Finally, here are my contributions to some other repositories. Right now, I'm fully concentrated on contributing to .NET, and putting full effort to mentor C# and Python - two wonderful languages, to some of my friends.
